DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, and ⁴~~7~~-13 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Patent No. 5,125,100 to Katznelson is the reference closest to the claimed invention. Katznelson discloses a digital group delay compensation system comprising: a digital allpass filter that is utilized in an implementation phase; and a system that generates coefficients for the allpass filter used in the implementation phase such that the overall performance of a system is measured and optimized in a calibration phase; wherein the definition of optimum overall performance of a system is user configurable and based on the measured amount of risetime, overshoot, and preshoot in the system step response and as such the optimization balances these three characteristics. However, Katznelson does not teach the definition of optimum overall performance of a system being user configurable and based upon a user defined weighting between a measured amount of risetime, overshoot, and preshoot in the system step response; and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
